

Soil&Rock Consultants
CONSULTING GEOTECHNICAL ENGINEERS

SENIOR GEOTECHNICAL ENGINEER AUCKLAND

Soil & Rock Consultants is a well established provider of geotechnical expertise to the industry. Expansion of the practice and succession planning has created an opportunity for suitably experienced and motivated candidate to enter a senior role. There is the potential for the right candidate, who is willing to take a step up in responsibility to progress towards a principal engineer level (shareholder) within two years.

The following technical competencies are essential for this position:

- Bachelor of Engineering (Civil/Geotechnical)
- Minimum 12 years experience in geotechnical engineering (preferably with local experience in wider Auckland area but not essential)
- Chartered Professional Engineer (Geotechnical), MIPENZ – or working towards
- Strong technical and analytical skills

The following responsibilities are associated with this role:

- Responsible for design, organization, supervision and interpretive reporting on various geotechnical projects
- Geotechnical analysis using proprietary software
- Geotechnical design work such as slip stabilizing/remedial works, geogrid reinforced structures, foundation engineering, slope stability, earthworks, retaining structures, ground improvement
- Maintaining existing client relations and developing new business
- Take the role of design team leader on projects
- Manage delivery of projects, manage staff resource to meet workload
- Ensure that technical checks and reviews of designs are carried out
- Assist with professional development of junior staff

Personal attributes:

- Client focused
- Enthusiastic and confident about geotechnical engineering
- Commercially aware
- Able to plan and prioritize workload
